CLEANING INLET FILTER
MODELS: 240FX, TK1

To be done if water flow rate is noticeably reduced at taps or if debris is commonly found in water supply.

- Turn off cold inlet water supply to heater.
- Open nearest hot water tap to drain lines.
- Position a water catch basin under the cold water connection to 240 FX and undo the drain plug. Remove drain plug with inlet filter screen.
- Clean filter screen with water and lightly applied brush.
- Reinsert filter screen and close drain plug.
- We strongly recommend to not operate the 240FX without the inlet filter screen in place.
