PREVENTING FREEZE DAMAGE
MODELS: 240FX, TK1

If you will not be using your heater for a long period of time or if the temperatures will drop below 32° F (-15° C) with the wind chill factor, turn off your heater and drain the unit of water. This will keep your unit from freezing and being damaged. Follow these instructions carefully:

Turn off the power supply to the 240FX Heater.
Turn off the manual gas control valve located outside your heater.
Turn off the manual water shut off valve located on the water supply line.
Open all hot water taps in the house. (bathroom, kitchen, laundry room, etc.). When the water flow has ceased, close all hot water taps.
Have a bucket or pan to catch the water from the unit’s drain plugs. Remove the drain plugs to drain all the water out of the unit.
Leave for 5 minutes.
Securely screw the drain plugs back into place.

Now when you want to use your heater again follow these steps:
Make sure all hot water taps are closed and the drain plugs are securely attached.
Purge the water line of debris.
Turn on the manual water control valve located on the water supply line.
Open all the hot water taps to verify water flows to the taps. Then close hot water taps.
Turn on the manual gas control valve located on the gas supply line.
Turn on the power supply to the 240FX Heater.
