**Compact Muffler Installation Instructions**

**Boiler side connection – Fig. 1**
- Slide long flue connection of Flue Silencer onto outlet of boiler or onto vent pipe coming from the boiler.
- Secure the Flue Silencer to the outlet of boiler or vent pipe and seal with high temperature silicone.

**Chimney side connection – Fig. 2**
- Wrap 3/8” sealing rope around vent pipe.
- Slide vent pipe into Flue Silencer outlet until against factory installed sealing rope stops.

**Completed installation Fig. 3**
- Wrap the stepped collar over connection (thin side on Flue Silencer, bulb side over vent pipe) and secure with two band clamps provided.
- Do not over tighten clamp over vent pipe.

- Minimum clearance to combustions is 18”.
- Flue silencer can be mounted in the horizontal or vertical position.
- If a barometric damper is being used it must be between the flue silencer and chimney.
