Heat Pump Hose Kits - Water Flow Rates

Models: SM, SM Split CS, CE, BP, SV, SV Split CS, TW, LV, LV Split CS, EP, CA, ES, LM, LM Split CS, EC, MC, WT, WW, RT

BOSCH

Introduction

Water quality is important in both the performance and life of your unit. Similar to water quality, the flow rates for each unit are important as they maximize the efficiency of the product. Each unit has a flow rate performance value and as a rule of thumb, Water Source Heat Pumps roughly have 3 GPM/ton flow rate. For specific values please see the performance data table in either the Brochure, Engineering Submittal Sheet (ESS), or Product Catalog for published flow rates. This literature can be found on the Bosch Climate website.

Please always reference the specific product capacity data tables for the specific Entering Air Temperature (EAT) and Entering Water Temperature (EWT) located in either the Engineering Submittal Sheet (ESS) or Product Catalog on the Bosch Climate website, for the published flow rates.
